### **INDUSTRIAL TRAINING AND INTERNSHIP BROCHURE**

### **Industrial Training and Internships**

[Duration - 2 / 3 / 4 / 6 / 8 / 12 Weeks]

Participant	Program Type		
Students	Industrial Training	Internship	Industrial Training and Internship
Faculties	Industrial Training	FDP	Industrial Training and Internship

www.asd.org.in

### **Technology Stack**

#### **AICTE NEAT Cell Evaluated**

Ministry of MSME, Govt. of India

## **Academy of Skill Development**

[ISO 9001:2015, MSME, GOVT. REGISTERED, AND A NON-PROFIT TRUST REGISTERED WITH GOVT. OF WB U/S 60 AND RULE 69, REG. NO. -190307248]

Head Quarter: Module 132, SDF Building, Salt Lake, Block GP, Sector V, Kolkata - 700091

Admission Form: https://asd.org.in/application-form.php

#### INDUSTRIAL TRAINING AND INTERNSHIPS

### **Develop SKILLS for the Industry**

- Do you want to upgrade and upskill to the latest Industrial tools?
- Do you want your resume to look more attractive?
- Do you want to put an ASD-certified badge on your resume?
- Do you want to work on Industry projects?
- Do you want to be more employable?

## ASD Internship is the platform to enhance your skills

### **Highlights of the Internships:**

- LIVE PROJECTS
- AGILE APPROACH
- SUBJECT EXPERTS FROM THE INDUSTRY
- INTERACTION WITH PEOPLE FROM THE INDUSTRY
- ACCOMMODATIVE SCHEDULE
- LIVE ONLINE INTERNSHIP
- LIVE SESSIONS
- CLASS RECORDINGS SHARED AFTER EACH SESSION

### **Certification:**

All INTERNS will earn six certificates after completion. ASD certificates are accepted by all universities and companies:

Internship Confirmation Letter		
Internship Certificate		
Industrial Training Certificate		
Internship and Project Letter		
Attendance Certificate		
Completion Certificate		

#### **OPEN FOR STUDENTS AND FACULTIES OF ALL DEPARTMENTS**

(CSE, ECE, IT, ME, CE, EE, EEE, EIE, BT, AEIE, ChE, BME, BCA, MCA, MSc, BSc, Diploma, etc.)

#### **Limited Seats – First Come First Serve**

#### **MODULES TO BOOST YOUR PROFILE**

#### **INTERNSHIP DOMAINS**

(Click on the links below to view the contents)

- 1. MATLAB AND ITS APPLICATIONS (PROJECT-BASED)
- 2. AUTOCAD 2D AND 3D (PROJECT-BASED)
- 3. SOLIDWORKS (PROJECT-BASED)
- 4. ANSYS (PROJECT-BASED)
- 5. DATA SCIENCE, AI, MACHINE LEARNING USING Python (PROJECT-BASED)
- 6. FULL STACK DEVELOPMENT USING MEAN STACK (PROJECT-BASED)
- 7. FULL STACK DEVELOPMENT USING MERN STACK (PROJECT-BASED)
- 8. INTERNET OF THINGS (IOT) (PROJECT-BASED)
- 9. INDUSTRIAL AUTOMATION USING PLC AND SCADA (PROJECT-BASED)
- 10. DIGITAL MARKETING (PROJECT-BASED)
- 11. ADVANCED EXCEL(PROJECT-BASED)
- 12. STAAD.PRO (PROJECT-BASED)
- 13. CHEMCAD (PROJECT-BASED)
- 14. 3DS MAX (PROJECT-BASED)
- 15. ELECTRICAL SYSTEM DESIGN WITH CAD (2D AND 3D) (PROJECT-BASED)
- 16. PROFESSIONAL JAVA AND ITS APPLICATIONS (PROJECT-BASED)
- 17. PYTHON PROGRAMMING AND ITS APPLICATIONS (PROJECT-BASED)
- 18. PROFESSIONAL C++ (PROJECT-BASED)
- 19. PROFESSIONAL C (PROJECT-BASED)
- 20. <u>CNC PROGRAMMING (PROJECT-BASED)</u>
- 21. <u>ADVANCED AUTOMOBILE APPLICATION IN COLLABORATION WITH AUTHORIZED TATA MOTORS</u> WORKSHOP (PROJECT-BASED)
- 22. FULL STACK DEVELOPMENT WITH JAVA [SPRING BOOT] (PROJECT-BASED)
- 23. CLOUD COMPUTING WITH AMAZON WEB SERVICES (PROJECT-BASED)
- 24. REVIT (PROJECT-BASED)
- 25. CYBER SECURITY AND ETHICAL HACKING (PROJECT-BASED)
- 26. MOBILE APP DEVELOPMENT WITH FLUTTER (PROJECT-BASED)
- 27. FULL STACK DEVELOPMENT USING PYTHON AND DJANGO
- 28. FULL STACK DEVELOPMENT WITH PHP AND MYSQL (PROJECT-BASED)
- 29. GENERATIVE AI AND PROMPT ENGINEERING (PROJECT-BASED)
- 30. VLSI BASED IC DESIGN (PROJECT BASED)
- 31. WEB DESIGNING USING HTML 5, CSS3, JAVASCRIPT, BOOTSTRAP (PROJECT BASED)

### **CERTIFICATION**

All Interns will receive 6 certificates (Click on the links below to view the sample certificate):

- 1. INTERNSHIP CONFIRMATION LETTER (Issued after enrolment in the INTERNSHIP)
- 2. INDUSTRIAL INTERNSHIP CERTIFICATE
- 3. INDUSTRIAL TRAINING CERTIFICATE
- 4. INTERNSHIP AND PROJECT LETTER
- 5. ATTENDANCE CERTIFICATE
- 6. COMPLETION CERTIFICATE

# IT - ITeS SSC nasscom

	MATLAB AND ITS APPLICATIONS (PROJECT BASED)		
No	Topics	Description	
1	Introduction to MATLAB	<ul> <li>Overview of MATLAB Interface</li> <li>MATLAB Environment (Command Window, Editor, Workspace, Path)</li> <li>Basic Syntax and Commands</li> <li>Variables and Data Types</li> <li>Arrays and Matrices</li> <li>File Operations (Saving, Loading, and Managing Scripts)</li> </ul>	
2	Basic Programming Constructs	<ul> <li>Scripts and Functions</li> <li>Conditional Statements (if, switch-case)</li> <li>Loops (for, while)</li> <li>Input and Output Handling</li> <li>Error Handling and Debugging</li> </ul>	
3	Data Visualization	<ul> <li>Plotting 2D Graphs         <ul> <li>Line, Bar, and Scatter Plots</li> <li>Subplots and Annotations</li> </ul> </li> <li>3D Plotting         <ul> <li>Surface, Mesh, and Contour Plots</li> </ul> </li> <li>Customizing Plots (Labels, Titles, Legends, Grid)</li> <li>Animation and Real-Time Plotting</li> </ul>	
4	Mathematical Foundations	<ul> <li>Linear Algebra Operations</li> <li>Solving Equations (Linear, Nonlinear)</li> <li>Calculus (Differentiation, Integration)</li> <li>Numerical Methods (Root Finding, Interpolation, Curve Fitting)</li> <li>Signal Processing Basics (Filtering, Fourier Transform)</li> </ul>	
5	Domain-Specific Applications	<ul> <li>■ Signal Processing         <ul> <li>FFT, Filtering, Convolution</li> <li>Sampling and Reconstruction</li> </ul> </li> <li>● Circuit Analysis         <ul> <li>Solving Linear Circuits</li> <li>Laplace Transform for Circuit Analysis</li> </ul> </li> <li>● Power Systems         <ul> <li>Load Flow Analysis</li> <li>Harmonics Analysis</li> </ul> </li> <li>● Control Systems         <ul> <li>Transfer Functions and State-Space Models</li> <li>Bode, Nyquist, and Root Locus Plots</li> <li>PID Controller Design</li> </ul> </li> <li>Mechanical Engineering         <ul> <li>Mechanics and Dynamics</li> <li>Rigid Body Simulation</li> <li>Vibration Analysis</li> </ul> </li> </ul>	

6		<ul> <li>Finite Element Analysis (FEA)         <ul> <li>Basics of FEA Using MATLAB</li> </ul> </li> <li>Thermodynamics and Fluid Dynamics         <ul> <li>Heat Transfer Simulation</li> <li>Flow Analysis</li> </ul> </li> <li>Robotics and Mechatronics         <ul> <li>Kinematics and Dynamics of Robotic Arms</li> <li>Path Planning and Trajectory Generation</li> </ul> </li> <li>Control Systems for Mechanical Systems         <ul> <li>Feedback Control Design</li> <li>Model Predictive Control (MPC)</li> </ul> </li> <li>Simulink Introduction</li> </ul>
	Advanced Topics	<ul> <li>Basics of Block Diagrams</li> <li>Electrical and Mechanical System         Modeling</li> <li>Simscape for Multi-domain Systems</li> <li>Optimization Techniques</li> <li>Linear and Nonlinear Optimization</li> <li>Genetic Algorithms and Other Heuristic         Methods</li> <li>Machine Learning with MATLAB</li> <li>Regression and Classification</li> <li>Neural Networks and Deep Learning         Basics</li> </ul>
7	Real-World Applications	<ul> <li>Case Studies in Electronics, Electrical, and Mechanical Engineering</li> <li>Projects and Mini-Projects:         <ul> <li>MATLAB-Based System Design</li> <li>Real-Time Data Analysis</li> <li>Simulation and Modeling Challenges</li> </ul> </li> </ul>
13	Project	Project work and report writing

	AUTOCAD 2D AND 3D (PROJECT BASED)
No	Topics
	Introduction of AutoCAD
1	1.1 Introduction, Advantage, and applications
	Coordinate system
2	1.1 Types of Coordinate System
	1.2 Use of the Mouse button
	Draw Instructions
	1.1 Line
	1.2 Circle
3	1.3 Polygon
	1.4 Arc
	1.5 Ellipse
	1.6 Polyline
	Modify
	1.1 Copy
	1.2 Move
	1.3 Mirror
4	1.4 Array
	1.5 Offset
	1.6 Trim
	1.7 Chamfer 1.8 Fillet
	1.9 Break
	1.10 Rotate
	Introduction of 3D
5	1.1 Introduction to 3D
	1.2 Isometric View
	Surface drawing
	1.1 Edge Surface
6	1.2 Tab Surface
	1.3 Rule Surface
	1.4 Revolve Surface
	Solid drawing
	1.1 Extrude
	1.3 Wedge
7	1.3 Cone
	1.4 Pyramid
	1.5 Torus
	1.6 Cylinder
	1.7 Press Pull
	Modify
8	1.13D Mirror
0	1.23D Rotate 1.33D Move
	1.43D Array
9	1.1 Render and light effect, Apply material color
10	Project work and documentation

	SOLIDWORKS (PROJECT BASED)		
No	Topics		
1	INTRODUCTION INTRODUCTION OF SOLIDWORKS APPLICATION AND ADVANTAGE		
2	PART DESIGN Concept of plane Convert entities LINE RECTANGLE CIRCLE SPLINE TRIM ARRAY MIRROR		
3	SOLID DESIGN  EXTRUDE (Assignments)  REVOLVE (Assignments)  EXTRUDE CUT (Assignments)  REVOLVE CUT (Assignments)  SWEEP (Assignments)  SWEEP CUT (Assignments)  SHELL (Assignments)  DIFFERENT TYPES OF GEAR DESIGN  SPARK GEAR (Assignments)  BEVEL GEAR (Assignments)		
4 5	ASSEMBLE DESIGN FUNCTION OF MATE MECHANICAL MATE SCREW (Assignments) GEAR (Assignments) EXPLODED VIEW ANY 3D OBJECT (Assignments) DRAWING DRAFTING OF 3D DESIGN DRAFTING OF PAGE SETUP		
	DIFFERENT TYPE OF VIEW		
6	Project work and documentation		

ANSYS (PROJECT BASED)		
No	Module	
1	Introduction for ANSYS Advantage of ANSYS Application of ANSYS	
2	Static structural analysis and its applications  Different types of Beam analysis  Different types of spring (Helical and Leaf spring)	
3	Steady-state thermal analysis and its applications Heat sink analysis Piston analysis	
4	Explicit Dynamics analysis and its applications based on velocity Base on gravity	
5	Fluid flow (CFX) and its applications Internal water flow analysis of a pipe External airflow analysis (cross-section area of an object) Heat transfer through a pipe	
6	Fluid flow (fluent) and its applications Internal water flow analysis of a pipe (cross-section area) External water flow analysis of any object (cross-section area) External airflow analysis of a car body Airfoil analysis of cross section area of an object (cross-section area)	
7	Project work and documentation	

	DATA SCIENCE, AI, MACHINE LEARNING USING Python (PROJECT-BASED)
Modules	Topics
Module 1	Introduction to Python & Data Science Python for Data Science Data Visualization in Python Data Analysis Using SQL (Optional) Data Analysis in Excel (Optional) Analytics Problem Solving (Optional) Math for Machine Learning
Module 2	NumPy Basics: Arrays and Multidimensional NumPy Attributes and Functions Creating Arrays from Existing Data Creating Array from Ranges Indexing and Slicing in NumPy Advanced Slicing in NumPy Nditer Function and Broadcasting Array Manipulation Functions NumPy Trigonometric Functions NumPy Arithmetic Functions NumPy Power and Reciprocal Functions NumPy Power and Mod Functions NumPy Multidimensional Matrix
Module 3	Getting Started with Pandas Dataset Description (Loan Prediction, Big Mart Sales) Read & Write Data using Pandas Reading Excel & CSV files Pandas Dataframes What are Pandas Dataframes & their operations? DataFrames and basic operations Data Exploration using Pandas Basic Descriptive Statistics using Pandas Data Manipulation using Pandas Handling Missing Values Aggregating data using Pandas
Module 4	Data Collection and Data Extraction Generate data frame from database Extract data from JSON Extract data from different formatted data and different formatted file Working with AWS cloud data Use of Data Lakes in AWS cloud
Module 5	Understanding Data Visualization Matplotlib library Bar Charts Line Charts Scatter Plots Exploring Two-dimensional data Exploring many dimensions Bubble charts representation Visualizing the content of a 2D array Adding a colormap legend to the figure Visualizing contour lines

	Plotting log charts for research
	Generating a PNG picture Generating PDF documents
Module 6	Regression Scikit-Learn EDA Correlation Analysis and Feature Selection Linear Regression with Scikit-Learn Five Steps Machine Learning Process Robust Regression Evaluate Regression Model Performance Multiple Regression Regularized Regression Polynomial Regression Dealing with Non-linear Relationships Feature Importance Data Preprocessing Variance-Bias Tradeoff Learning Curve Cross Validation
Module 7	CV Illustration  Classification Logistic Regression Introduction to Classification K-Nearest Neighbor Understanding MNIST SGD Performance Measure and Stratified k-Fold Confusion Matrix Precision, Recall F1 Precision-Recall Tradeoff Altering the Precision-Recall Tradeoff ROC
Module 8	Support Vector Machine (SVM) Concepts Linear SVM Classification Polynomial Kernel Radial Basis Function Support Vector Regression
Module 9	Tree Introduction to Decision Tree Training and Visualizing Visualizing Boundary Tree Regression, Regularization, and Overfitting Gini Impurity or Entropy?
Module 10	Ensemble Learning Methods Introduction Bagging

	Random Forests and Extra-Trees
	AdaBoost
	Gradient Boosting Machine
	XGBoost Installation
	XGBoost
	Dimensionality Reduction Concept
	PCA Introduction
Module 11	Kernel PCA
	Kernel PCA Demo
	LDA vs PCA
	Unsupervised Learning Techniques
	Clustering
	K-Means
	Limits of K-Means
Module 12	Using Clustering for Image Segmentation
	Using Clustering for Preprocessing
	Using Clustering for Semi-Supervised Learning
	DBSCAN
	Natural Language Processing (NLP)
	Lexical Processing
	Syntactic Processing
Module 13	Syntactic Processing - Assignment
	Semantic Processing
	Case Study: Sentiment Analysis
	Market Basket Analysis
Module 14	Project work and documentation

	FULL STACK DEVELOPMENT USING MEAN STACK (PROJECT-BASED)
Modules	Topics
	Introduction to NODEJS Application
	Introduction to NODE.JS
	Asynchronous JavaScript Concept
1	The importance of being asynchronous
_	Introduction to Setting up a Node.js Environment
	Run your first NODE.JS Application
	The Node.js process
	Working in REPL Node JS Console
	File System& File Streaming  Working with a built in module
	Working with a built-in module Concept of File System Module Reading
2	Directories
	Reading Files
	Working with Streams
	Readable stream & Writable stream
	Building servers
	Creating servers with HTTP
3	Receiving data
	Handling GET, POST, PUT, and DELETE requests
	Sending requests
	Introduction to ExpressJS
	Introduction to using the Express framework to set up a web server Routes, rendering,
4	layouts, URL building, express servers
	Configuration
	Views Middlewares
	Installation of Mongo Database
	Store data with Mongoose and MongoDB
5	Mongo Db connection with ExpressJs framework
	Sample CRUD (Create, Read, Update, Delete) operation in express
	Introduction to Angular
	Angular 8 v/s 7 v/s 6 v/s AngularJS
	Setup of NodeJS and Angular
	NodeJS Introduction (NPM)
6	Angular CLI
	Difference between TypeScript and JavaScript
	How does Angular get started?
	First Angular App
	Components Overview
	Introduction to Components
	Creating components
7	Role of AppModule & Component Declaration
	Working with Component templates
	Working with Component Styles
	Understanding Component Selector
	Data binding and Event Binding, Directives
8	Introduction to Modules & Data Binding What is

	Interpolation
	Property & Event binding
9	Attribute Binding Class Binding Style Binding Two-Way Data Binding Binding to Custom Properties Splitting Apps into Components Property & Event binding overview What is nglf,ngFor,ngSwitch? Services & Dependency Injection, Routing Concept Introduction to Dependency Injection
10	Why do we need Services? What is Routing? Why do we need a Router? Setting up and Loading Routes Navigating with Router Links Understanding Navigation Paths Styling Active Router Links Passing Parameters to Routes Fetching Route Parameters
11	Transport Output using Pipes Introduction to Pipes Why are Pipes useful? Using Pipes Parameterized Pipes Chaining Multiple Pipes Creating a Custom Pipe Parameterizing a Custom Pipe
12	Making HTTP Requests, HTTP Client Introduction to HTTP Requests How HTTP Requests Work in SPAs Sending Requests Introduction to HttpClient Unlocking the HttpClient Request Configuration & Response Requesting Events
13	Forms and Validation Template Driven Forms Reactive Forms
14	Project Work and Documentation

	FULL STACK DEVELOPMENT USING MERN STACK (PROJECT-BASED)
Modules	Topics
1	Introduction to NODEJS Application Introduction to NODE.JS Asynchronous JavaScript Concept The importance of being asynchronous Introduction to setting up a Node.js Environment Run your first NODE.JS Application The Node.js process Working in REPL
2	Node JS Console  File System& File Streaming Working with built-in module Concept of File System Module Reading Directories Reading Files Working with Streams Readable stream & Writable stream
3	Building servers  Creating servers with HTTP Receiving data  Handling GET, POST, PUT, and DELETE requests Sending requests  HTTP streaming Working with TCP  Working with Pipes  Deals with JSON Data.
4	Building APIs using modules, events, and packages What is NPM Installing Packages Locally Adding dependency in package.json Installing packages globally Updating packages The EventEmitter API CommonJS Modules
5	Introduction to ExpressJS Introduction to using the Express framework to set up a web server Routes, rendering, layouts, URL building, express servers Configuration Views Middlewares
6	Installation of Mongo Database
7	Store data with Mongoose and MongoDB. Mongo DB connection with ExpressJs framework.
8	Mongo DB Querying with Mongoose
9	MongoDB CRUD operation using Express Introduction to setting up a MongoDB database and connecting it to a Node.js server Sample CRUD(Create,Read,Update,Delete ) operation in NODE.JS
10	Authentication With Passport and JWT Stateful vs. Stateless Authentication OAuth2 Passport JWT – JSON Web Tokens
11	Advanced Topics Node.js API design Error Handling Debugging Testing
12	Introduction to ReactJS Introduction Downloading and Installing ReactJS Understanding Virtual DOM
13	Components in ReactJS

	Douglaving data in Docat IC
	Rendering data in ReactJS  Applying CSS class and LTML content in the Boart IS Companyon
	Applying CSS class and HTML content in the ReactJS Component
	lifecycle and state Understanding the state of React
	Creating multiple components in ReactJs Creating reusable components.
	Properties and Events Working with properties
	Accessing Child properties
14	Understanding events in ReactJS
	Exploring static methods
	Forms Components
15	Working with Forms in ReactJS
	Accessing DOM
16	Referring DOM nodes
	Tooling Support
	Converting JSX to JS
	Using Gulp To compile and concatenate JSX files - I
	Using Gulp To compile and concatenate JSX files (Using Browserify) – II Component Communication
	Working with jQuery – Ajax DOM Event Listeners
	Inline Styles in ReactJS
17	Using dangerously SetInnerHTML
	Major AddOns in React
	Two-Way Data Binding
	Clone Elements - [cloneWithProps Deprecated - Use React.cloneElement instead
	Using React.cloneElement
	Making use of classSet to apply Conditional Styles Making use of class names to apply conditional
	styling Animation using CSS Transition
	Introduction to React Router
18	Working with React Router
	Working with Links & Creating Nested Routes Refactoring Routes and Components
	React and Remote Data
19	Introducing Fetch
	Rendering Remote Data in Components
20	Project work and documentation

	INTERNET OF THINGS (IOT) (PROJECT-BASED)	
No	Topics	
1	Introduction to IOT Scope, opportunity, application IOT PROTOCOL IoT Architecture Different IOT Devices Networking concept Introduction to Arduino Programming Introduction to Python programming	
2	WiFi devices WiFi connection AT Command for WiFi access WiFi board setup (processor and controller) Programming with I/o ports Analog sensor interfacing Digital sensor interfacing LED and motor interfacing concept Load control using WiFi-based system	
3	Introduction to cloud computing Working with different cloud services Local IOT Global IOT Introduction to HTML Basic HTML code for web design Data upload into the cloud WiFi-based device control	
4	Introduction to MIT App Inventor App design using MIT app inventor	
5	Project work and documentation	

SL. No.	Topics
Module-1	IoT Basics, Protocols, Components
Module-2	Arduino basic programming/Python programming
Module-3	Different sensors and electronic components
Module-4	Thingspeak cloud services
Module-5	IoT cloud local and global cloud
Module-6	Analog, PWM, Digital pin coding
Module-7	Circuit Python vs Micro Python vs Arduino
Module-8	MIT App Inventor basics and App development
Module-9	Project
Module-10	Project
Module-11	Project
Module-12	Presentation

	INDUSTRIAL AUTOMATION USING PLC AND SCADA (PROJECT-BASED)
Modules	Topics
	Introduction Industrial Automation
1	A. What is PLC?
	B. Brief History Of PLC
	Actuation
2	A. Manual
2	B. Electrical
	C. Mechanical
	Hardware with Assignment
	A. Toggle Switch
	B. Push Button
3	C. Relay
	D. Contactor
	E. Sensor
	F. Timer
	PLC In Details
	A. Siemens PLC
4	B. PLC Modules
	C. PLC Software
	D. Creating Project
	Programming logic (solving problems with Assignments)
	A. NO/NC
	B. SPDT, LATCHING
5	C. MEMORYBIT
3	D. COUNTER
	E. COMPARATOR
	F. TIMER
	G. Operation control of analog system
	Familiar with Honeywell PLC
	A. Soft-master and how it works
7	B. Pc to PLC Communication
	C. Master Logic PLC
	D. Applications
	Introduction to SCADA
	A. Different SCADA Software and its application
8	B. How it works in the automation industry
_	C. Application through creating User project
	D. Communication and interfacing between PLC to PC system
	E. (SCADA Screen)
	Creating Any Electrical Process Through Tag Management
	A. Direct Tagging
	B. C-Action SCADA Operation
•	C. Object Hiding
9	D. Flashing
	E. Digital Display
	SCADA Analog operation
	i. Analog operation, Creating a project window of analog signal, Data show analog
4.0	ii. Assignment Based on an analog system, Valve Control System, Monitoring Process
10	Project work and documentation

#### DIGITAL MARKETING (PROJECT-BASED)

#### **Search Engine Marketing**

- Understand & Create Customer Journey Keyword Research & Planning
- Search & Smart Display Campaigns

#### **Social Media Marketing**

- Facebook Marketing
- Instagram Marketing
- Twitter Marketing
- LinkedIn Marketing

#### **Email Marketing**

- How to write effective content
- How to increase leads through nurturing
- Email Marketing Strategies for B2B & B2C Businesses Drip Email Campaigns
- Best Email Templates for Communication

#### **Web Analytics**

- Understanding Google Analytics (Top Rated tool in the Industry)
- Website tracking through Google Tag Manager

#### Facebook & Instagram Marketing

- Facebook Pages and Post Best Practices Facebook Ads Optimization and Reporting Face- book Messenger, Shop, Pixel
- Building Brand Awareness
- Driving Online Sales/Lead
- Project work and documentation

#### ADVANCED EXCEL (PROJECT-BASED)

- Data filters: AutoFilter and advanced filters
- Sorting, Customize sorting
- Subtotals
- Cell level validations
- Specifying a valid range of values for a cell
- Specifying a list of valid values for a cell
- Specifying custom validations based on the formula for a cell
- Using data tables for data analysis
- Mastering PivotTables
- Using external data sources
- Multiple consolidation ranges
- Customizing PivotTable layout
- PivotTable advanced options
- Pivot Charts
- Workbook sharing, Tracking changes
- Merging workbooks
- Workbook and sheet protection
- Online collaboration (requires Microsoft NetMeeting and Microsoft Outlook)
- Scheduling meetings and web discussions
- Goal Seek
- Scenario Manager
- Creating and editing scenarios
- Merging scenarios
- Auditing
- Tracing precedents and dependents
- Tracing errors
- Managing add-ins
- Customizing toolbars and menus
- Customizing views
- Customizing calculations and iterations
- Settings, Creating custom lists
- Conditional formatting of cells
- Creating, managing, and merging styles for cell formatting
- Working with functions (based on your requirements)
- Financial functions, Date and time functions, Statistical functions, Lookup, and reference functions
- Database functions, Text manipulation functions, Logical functions
- Worksheet and cell information functions
- Project work and documentation

#### STAAD.PRO (PROJECT-BASED)

#### Description

Our STAAD.PRO training course will give you all the knowledge needed to work on the STAAD.PRO software. This course will enable you to design any type of structure and share your synchronized model data with confidence among your entire design team, using STAAD.PRO. Ensure on-time and on-budget completion of your steel, concrete, timber, aluminum, and cold-formed steel projects, regardless of complexity. You can confidently design structures anywhere in the world using over 80 international codes, reducing your team's need to learn multiple software applications.

#### **Expectations and Goals**

- METHODS OF CREATING BEAM MODEL
- SPECIFYING MEMBER PROPERTIES
- SPECIFYING SUPPORTS
- SPECIFYING LOADS
- LOAD CASE TO BE USED IN DESIGN SPECIFYING
- DESIGN PARAMETERS SPECIFYING THE CODE
- VIEWING INPUT COMMAND FILE
- METHODS OF CREATING TRUSS MODEL
- METHODS OF CREATING RCC FRAME MODEL
- USING STRUCTURAL WIZARD SPECIFYING MEMBER
- PERFORMING ANALYSIS / DESIGN
- VIEWING OUTPUT FILES
- POST-PROCESSING TUTORIAL PROBLEMS
- PROJECT WORK

#### **Prerequisites**

 Anybody interested in STAAD.PRO can take this training. Knowledge of engineering drawing is needed.

#### **Course Schedule**

No	Торіс
1	Introduction to Staad pro Why we learn staad pro Briefly about STAAD.PRO
2	Design Add space Add beam Add plate Creating model Applying many types of support Use rotation Use of pan
3	Material use Use of concrete in design Use of steel in design Calculation of thickness in design
4	Load Assigning the dead load Assigning the live load Assigning the load combinations Use of nodal load Use of member load Use of floor load Use of temperature Use of plate load
5	Design analysis Analysis the design Resolve any error in the design
6	Use codes Uses of Indian codes Use of bridge codes
7	Concrete design Parameters selection Using various types of commands
8	Structural wizard

	Generate model Use rotation
	Use spin
9	Reports
9	Generate the report of the full design
10	STAAD.PRO editor
10	To change the load value & load direction
11	Project selection
	Project selection by individual or group
12	Project work and documentation

#### CHEMCAD (PROJECT-BASED)

#### Description

CHEMCAD is a software suite for process simulation that broadens an engineer's capabilities and increases productivity. CHEMCAD helps engineers when facing the toughest chemical process models or addressing day-to-day challenges. This chemical process simulation software fits into the chemical engineering workflow and supercharges an engineer's efficiency and most sufficiently. It continues to evolve to meet the ever-expanding need of chemical engineers. CHEMCAD is designed to help you drive productivity and tackle the toughest chemical models

#### **Expectations and Goals**

- Process development.
- Equipment design.
- Equipment sizing.
- Thermophysical property calculations.
- Dynamic simulations.
- Process intensification studies.
- Energy efficiency/optimization.
- Data reconciliation.
- Process economics.
- Troubleshooting/process improvement.
- Microsoft Visual Basic.
- Operator training systems.
- Integrated solution generation.

#### **Benefits**

- All modules work within a single graphical user interface for seamless interaction
- Easily integrates into chemical engineering computing environment
- Highly customizable, flexible,, and affordable

#### **Course Overview**

- Overview of CHEMCAD functions
- Overview and navigation of the physical property database
- Adding a new component to the database
- Overview of thermodynamic options
- Building a flowsheet for design purposes
- Modeling an existing process
- Quantitative and qualitative use of simulation
- Using simulation for day-to-day tasks
- Using plant data in process flowsheets
- CHEMCAD for transient and static problems
- Simulation as an extension of your engineering thought process
- Modeling plant utilities (steam, process water, etc.)
- Course covers:
- Recycle loops
- Distillation
- Reactors
- Heat exchangers
- CHEMCAD controllers, CHEMCAD plots and reports
- Solid components
- Electrolytes
- Component binary interaction parameters (BIPs)

#### 3DS MAX (PROJECT-BASED)

#### **Objectives of Our 3DS Max Design Courses**

- Autodesk 3ds Max Interface and Workflow
- · Assembling Files by importing, linking, or merging
- 3D Modeling with Primitives and 2D objects
- Using Modifiers to create and modify 3D objects
- Materials and Maps
- Autodesk 3ds Max Lighting
- Working with Cameras and Exposure Control
- Rendering using various renderers such as Scanline, ART, and Arnold
- Animation for Visualization

#### **DETAILS OF SYLLABUS**

#### Introduction to Autodesk 3ds Max:

- Overview
- Visualization Workflow
- The Autodesk 3ds Max Interface
- File Commands
- Viewport Display and Labels

#### **Autodesk 3ds Max Configuration:**

- Viewport Navigation
- Viewport Configuration and Settings
- Viewport Configuration and Navigation
- Object Selection Methods
- Units Setup
- Object Properties
- Copy, rotate, scale, move, etc.

#### **Modeling From 2D objects:**

- 3D Modeling from 2D Objects
- The Lathe, lattice Modifier
- 2D Booleans
- The Extrude Modifier
- 3D Boolean Operations
- Using Snaps for Precision
- The Sweep Modifier

#### 2D shape & 2D shape modifier:

- Trim and extend
- Chamfer & fillet
- Outline, refine, insert
- Attach, weld, break, fuse
- Line, rectangle, circle, star, Arc, Text, etc.

#### 3D modifier:

• Bend, Tapper, Twist, Wave, Squeeze, Skew, Noise etc.

#### **Standard Primitives:**

• Box, sphere, cylinder, plane, cone, etc.

#### **Extended Primitives:**

• Hedra, chamfer box, ring wave hose, etc.

#### **Compound objects:**

Morph, scatter, blob mesh, shape merge, connect, pro cutter

#### Edit poly:

- BEVEL
- EDIT vertices, chamfer edge, connect edge, bridge, edit border, extrude edge, outline, flip
- Soft selection, create shape from selection, hinge from edge

#### **Materials:**

- Understanding Materials and Maps
- Material Shaders
- Managing Materials
- General Materials
- Assigning Maps to Materials

Different types of 3D modeling Project work and documentation

### ELECTRICAL SYSTEM DESIGN WITH CAD (2D AND 3D) (PROJECT-BASED)

No	Topics
1	The basic concept of AutoCAD Cartesian Co-Ordinate System 1.1 Absolute Co-Ordinate System 1.2 Relative Co-Ordinate System 1.3 Polar Co-Ordinate System
2	Auto-cad 2d 1.1 line 1.2 Circle 1.3 Polygon 1.4 Ellipse 1.5 Text 1.6 Point
3	Using modify command  1.1 Copy 1.2 Move 1.3 Mirror 1.4 Array 1.5 Offset
4	Introduction of electrical circuit  1.1 Introduction to project manager  1.2 Working with projects  1.3 Adding a drawing
5	Inserting the various Electrical Equipment in OLD/SLD  1.1 Designing of single-phase 1.2 3-phase diagram with control & power circuit 1.3 Inserting components 1.4 Inserting wires
6	PLC modules 1.1 Inserting PLC modules 1.2 Designing ladder logic using cad 1.3 Component tagging
7	Schematic report 1.1Generate a schematic report 1.2Generate a panel report
8	Project work and documentation

### JAVA AND ITS APPLICATIONS (PROJECT-BASED)

#### Description

This course on Java aims to provide learners with both classical and modern features of the language of Java and their practical use.

#### **Expectations and Goals**

Learning programming and core Java concepts Introduction to Inheritance, Threads, and Collections Deploy JDBC for connecting various applications Understand Method Overriding and Overloading Use Array and Hash Map for storing dynamic data Create Threads in Java by Implementing Runnable Interface. Work on live projects for hands-on experience.

#### **Prerequisites**

Anybody can take this Training Course to be a Java Developer.

#### **Course Schedule**

No	Topics
1	Object-Oriented Programming – Core Concepts
2	Introduction to java Primary components of a Java program: Class, Interface, Enum, and Annotation Writing, compiling, and running a Java program from the command line What is Java byte code? JVM and JRE Java bytecode interpreter and JIT compiler How to work with Eclipse, Netbeans, and IntelliJ IDE
3	Class and Object What is an object: object properties and operations What is a class How does a class describe properties of objects: private fields, accessor, and mutator methods How does a class describe operations using methods Method overloading The 'this' keyword
4	Constructors What is a constructor Default constructor Constructor overloading Constructor chaining
5	Static or class variables and methods Static variable Static method
6	Some advanced class concepts Static and non-static field initializers Static and non-static initialization blocks Order of initializations Private constructors and singleton class**
7	Nested classes** Static member nested classes Member inner classes Local inner classes Anonymous inner classes
8	Packages in Java Package concept and its advantages How to place a class inside a package How to import a class The default access modifiers Compiling and running java classes in packages: concept of java classpath Creating jar packed libraries in java** Java extension mechanism** Creating executable jar files**

Inheritance What is inheritance: java inheritance mechanism Inheriting fields and methods from superclass Adding fields and methods in subclass Upcasting, downcasting, and instanced operator Method overriding, dynamic binding, and runtime polymorphism Use of the 'super' keyword Constructor chaining using the 'super' keyword Inheritance and access modifiers Final classes Concept of single-rooted class hierarchy in Java: the 'Object' class Abstract classes and interfaces Abstract classes and inheritance interfaces and its implementation interfaces and multiple inheritance Interfaces and loose coupling Field declarations within an interface Marker interfaces Default implementation of methods within interface** Functional interfaces and lambda expressions**  Exception handling Why do we need exception handling in Java Exception handling mechanism in Java using try, catch, and finally Stack unwinding Difference between Exceptions and Errors 'Throwable' class Checked and unchecked exceptions exception chaining Custom exceptions Catching multiple exceptions in Java ** Try with resources ** Suppressed exceptions****  Multithreading Concept of processes and threads Multithreading by extending Thread class Multithreading by implementing Runnable interface The life cycle of a thread Thread oynchronization: the concept of monitor, synchronized blocks, and synchronized methods Interthread communication by guarded blocks: wait, notity, and notifyAil Deadlock, starvation, and livelock** Lock objects** Executors** Generics Why use Generics? Generic Types Raw Types Generic Methods Bounded Type parameters Generics, Inheritance, and Subtypes Type inference Wildcards Type Erasure Restrictions on generics  Java collection framework Introduction to Java collection framework Core collection interfaces and their Introduction to Java collection framework Core collection interfaces and their Introduction to Java collection framework Core collection interfaces and dheir Introduction and finding parter value Basic I/O Concept of Input and		
methods from superclass Adding fields and methods in subclass Upcasting, downcasting, and instanceof operator Method overriding, dynamic binding, and runtime polymorphism Use of the 'super' keyword Constructor chaining using the 'super' keyword Inheritance and access modifiers Final classes Concept of single-rooted class hierarchy in Java: the 'Object' class  Abstract classes and inheritance Interfaces Abstract tehon Abstract class Abstract class and inheritance Interfaces and its implementation interfaces and multiple inheritance Interfaces and loose coupling Field declarations within an interface Marker interface* Functional interfaces and lambda expressions**  Exception handling Why do we need exception handling in Java Exception handling mechanism in Java using try, catch, and finally Stack unwinding Difference between Exceptions and Exception chaining Custom exceptions Catching multiple exceptions in Java ** Try with resources** Suppressed exceptions***  Multithreading Concept of processes and threads Multithreading by extending Thread class Multithreading by implementing Runnable interface The life cycle of a thread Thread synchronization: the concept of monitor, synchronized blocks, and synchronized methods Interthread communication by guarded blocks: wait, notify, and notifyAll Deadlock, starvation, and livelock** Lock objects** Executors** Generic Generic Why use Generics? Generic Types Raw Types Generic Methods Bounded Type parameters Generics, Inheritance, and Sultypes Type inference Wildcards Type Erasure Restrictions on generics  Java collection framework Introduction to Java collection framework Core collection interfaces and their implementations: Collection, Set, List, Queue, Deque, Map, SortedSet and Sorted-Map Aggregate operations: Reduction and Parallelism** Algorithms: Sorting, Shuffling, Routine data manipulation, Searching, Composition and finding extreme value  Basis (1)  Basis (1) Concept of Input and Output in Java Byte Streams and Characters frames Metheritance of the process of the pr		Inheritance
Upcasting, downcasting, and instanced operator Method overriding, dynamic binding, and runtime polymorphism Use of the 'super' keyword Constructor chaining using the 'super' keyword Inheritance and access modifiers Final classes Concept of single-rooted class hierarchy in Java: the 'Object' class  Abstract classes and interfaces Abstract class and inheritance interfaces and its implementation Interfaces and multiple inheritance Interfaces and lose coupling Field declarations within an interface Marker interface Default implementation of methods within interface** Functional interfaces and lambda expressions**  Exception handling Why do we need exception and firm of your classes and interface between Exceptions and Errors 'Throwable' class Checked and unchecked exceptions Exception chaining Custom exceptions Catching multiple exceptions in Java ** Try with resources** Suppressed exceptions***  Multithreading Concept of processes and threads Multithreading by extending Thread class Multithreading by implementing Runnable interface The life cycle of a thread Thread synchronization: the concept of monitor, synchronized blocks, and synchronized methods Interthread communication by guarded blocks: wait, notify, and notifyAll Deadlock, starvation, and livelock** Lock objects** Executors**  Generics Why use Generics? Generic Types Raw Types Generic Methods Bounded Type parameters Generics, Inheritance, and Subtypes Type inference Wildcards Type Erasure Restrictions on generics  Java collection framework Introduction to Java collection framework Core collection interfaces and their Implementations: Collection, Set, List, Queue, Deque, Map, SortedSet and Sorted-Map Aggregate operations: Reduction and Parallelism** Algorithms: Sorting, Shuffling, Routine data manipulation, Searching, Composition and finding extreme value  Basic I/O Concept of Input and Output in Java Byte Streams and Characters Streams Buffered Streams Scanning and Formatting Command Line I/O Data and Object Streams File I/O: Nio.2**	9	
Method overriding, dynamic binding, and runtime polymorphism Use of the 'super' keyword constructor chaining using the 'super' keyword inheritance and access modifiers Final classes Concept of single-rooted class hierarchy in Java: the 'Object' class  Abstract classes and inheritance inheriances Abstract class and inheritance inheriances and multiple inheritance interfaces and loose coupling Field declarations within an interface Marker interfaces Default implementation of methods within interface** Functional interfaces and lambda expressions**  Exception handling Why do we need exception handling in Java Exception handling mechanism in Java using try, catch, and finally Stack unwinding Difference between Exceptions and Errors 'Throwable' class Checked and unchecked exceptions Exception chaining Custom exceptions Catching multiple exceptions in Java ** Try with resources** Suppressed exceptions****  Multithreading Concept of processes and threads Multithreading by extending Thread class Multithreading by implementing flumnable interface The life cycle of a thread Thread synchronization: the concept of monitor, synchronized blocks, and synchronized methods Interthread communication by guarded blocks: wait, notify, and notifyAll Deadlock, starvation, and livelock** Lock objects** Executors** Generics Why use Generics' Generics Why use Generics' Generics Why use Generics Generics, Inheritance, and Subtypes Type inference Wildcards Type Erasure Restrictions on generics  Java collection framework Introduction to Java collection framework Core collection interfaces and their Inimplementations: Collection, Set, List, Queue, Deque, Map, SortedSet and Sorted-Map Aggregate operations: Reduction and Parallelism** Algorithms: Sorting, Shuffling, Routine data manipulation, Searching, Composition and finding extreme value  Basic I/O Concept of Input and Output in Java Byte Streams and Character Streams Buffered Streams Connoised to the processor of the proc		, · · · · · · · · · · · · · · · · · · ·
Constructor chaining using the 'super' keyword Inheritance and access modifiers Final classes Concept of single-rooted class hierarchy in Java: the 'Object' class  Abstract classes and inheritance Interfaces and its implementation Interfaces and multiple inheritance Interfaces and loss coupling Field declarations within an interface Marker interfaces Default implementation of methods within interface** Functional interfaces and lambda expressions***  Exception handling Why do we need exception handling in Java Exception handling mechanism in Java using try, catch, and finally Stack unwinding Difference between Exceptions and Errors 'Thromable' class Checked and unchecked exceptions Exception chaining Custom exceptions Catching multiple exceptions in Java ** Try with resources** Suppressed exceptions***  Multithreading Concept of processes and threads Multithreading by extending Thread class Multithreading by implementing Runnable interface The life cycle of a thread Thread synchronization: the concept of monitor, synchronized blocks, and synchronized methods Interthread communication by guarded blocks: wait, notify, and notifyAll Deadlock, starvation, and livelock**  Is denical synchronization: the concept of monitor, synchronized blocks, and synchronized methods Interthread communication by guarded blocks: wait, notify, and notifyAll Deadlock, starvation, and livelock**  Generics Why use Generics? 6	Project work and documentation				

### CLOUD COMPUTING WITH AMAZON WEB SERVICES (PROJECT-BASED)

#### Description

AWS Certification Training from us is designed to provide in-depth knowledge about AWS architectural principles and its services. Cloud computing jobs are hot commodities in IT, as more companies adopt the cloud. From managing big data to cracking down on security, a cloud career can head in several different directions.

#### **Expectations and Goals**

- Students can understand AWS Architecture and different models of Cloud Computing
- Compute Services: AWS EC2, Auto Scaling and Load Balancing, AWS Lambda, RDS, Cloudwatch
- Students can host a cloud-based static website

#### **Prerequisites**

Anybody interested in Cloud Computing can take this Training but one international credit/debit card mandatory to register with AWS Cloud.

#### Course Schedule

Cours	e Schedule
No	Торіс
1	Introduction to Cloud Computing Different cloud service providers Cloud computing application and future scope Working with different instances(windows, Linux) Putty configuration EC2 volume, image Snapshot
2	Introduction to S3 S3 version Security AWS Cloud Watch Alarm SNS SMS Billing alert Corn expression, arn
3	IAM User, Role, Policy, group, MFA Cognito, CloudFront Route53 VPC Lambda
4	ELB Auto Scaling RDS Dynamo DB AWS IOT Machine Learning tool
5	Project work and documentation
	· ·

#### FULL STACK DEVELOPMENT WITH JAVA [SPRING BOOT] (PROJECT-BASED)

#### Description

This course offers hands-on experience with the major features of Spring and Spring Boot, which includes configuration, data access, REST, AOP, auto-configuration, actuator, security, and Spring testing framework to build enterprise and microservices applications. On completion, participants will have a foundation for creating enterprise and cloud-ready applications.

#### **Expectations and Goals**

By the end of the course, you should be able to meet the following objectives:

- Spring configuration using Java Configuration and Annotations
- Aspect-oriented programming with Spring
- Testing Spring applications using JUnit 5
- Spring Data Access JDBC, JPA, and Spring Data
- Spring Transaction Management
- Simplifying application development with Spring Boot
- Spring Boot auto-configuration, starters and properties
- Build a simple REST application using Spring Boot, embedded Web Server and fat JARs or classic WARs
- Implementing REST client applications using RestTemplate
- Utilize Spring Boot enhancements to testing
- Spring Security
- Enable and extend metrics and monitoring capabilities using Spring Boot actuator

#### **Prerequisites**

Java Programming: The most basic building block of Android development is the programming language Java. To be a successful Android developer, you'll need to be comfortable with Java concepts like loops, lists, variables, and control structures.

#### **Course Schedule**

Module	Topic
Module 1	<ul> <li>Spring Overview</li> <li>What is the Spring Framework?</li> <li>The DI Container</li> <li>The Spring Framework History and EcoSystem</li> </ul>
Module 2	Java Configuration  Java configuration and the Spring application context  Configuration and @Bean annotations  Minport: working with multiple configuration files  Defining bean scopes  Launching a Spring Application and obtaining Beans
Module 3	<ul> <li>More Java Configuration</li> <li>External properties &amp; Property sources</li> <li>Environment abstraction</li> <li>Using bean profiles</li> <li>Spring Expression Language (SpEL)</li> </ul>
Module 4	Annotation and Component Scanning
Module 5	Inside the Spring Container  The Spring Bean Lifecycle  The BeanFactoryPostProcessor interception point  The BeanPostProcessor interception point

Spring Bean Proxies	
@Bean method return types	
Introducing Aspect-oriented programming	
• What problems does AOP solve?	
Defining pointcut expressions	
<ul> <li>Implementing various types of advice</li> </ul>	
Testing a Spring-based Application	
<ul> <li>Spring and Test-Driven Development</li> </ul>	
• Spring 5 integration testing with JUnit 5	
Module 7  • Application context caching and the @DirtiesCon	text annotation
<ul> <li>Profile selection with @ActiveProfiles</li> </ul>	
Easy test data setup with @Sql	
JDBC Simplification with JdbcTemplate	
• How Spring integrates with existing data access to	echnologies
Spring's JdbcTemplate	
<ul> <li>DataAccessException hierarchy</li> </ul>	
Transaction Management with Spring	
Transaction overview	
Module 9 • Transaction management with Spring	
<ul> <li>Transaction propagation and rollback rules</li> </ul>	
Transactions and integration testing	
Spring Boot Feature Introduction	
Module 10 • Introduction to Spring Boot Features	
Value Proposition of Spring Boot	
<ul> <li>Creating a simple Boot application using Spring In</li> </ul>	nitializer website
Spring Boot – A closer look	
Dependency management using Spring Boot start	ters
Module 11 • How auto-configuration works	
Configuration properties	
Overriding auto-configuration	
Using CommandLineRunner	
Spring Boot – Spring Data JPA	
Quick introduction to ORM with JPA	
Module 12  • Benefits of using Spring with JPA	
JPA configuration in Spring     Configuration IPA using Spring Post	
Configuring Spring JPA using Spring Boot     Spring Data JPA dynamic repositories	
<ul> <li>Spring Data JPA dynamic repositories</li> <li>Web Applications with Spring Boot</li> </ul>	
Introduction to Spring MVC and request processing	ng
Controller method signatures	116
Module 13     Using @Controller, @RestController and @GetMa	anning annotations
Configuring Spring MVC with Spring Boot	
Spring Boot packaging options, JAR or WAR	
RESTful Application with Spring Boot	
An introduction to the REST architectural style	
<ul> <li>Controlling HTTP response codes with @Respons</li> </ul>	eStatus
• Implementing REST with Spring MVC, @	
@ResponseBody	, , ,
<ul> <li>Spring MVC's HttpMessageConverters and autom</li> </ul>	natic content negotiation
Spring Boot Testing	
Spring Boot testing overview	
Module 15 • Integration testing using @SpringBootTest	
Web slice testing with MockMvc framework	
8	

	Securing REST Application with Spring Security  • What problems does Spring Security solve?
Module 16	<ul> <li>Configuring authentication</li> <li>Implementing authorization by intercepting URLs</li> </ul>
IVIOGGIE 10	Authorization at the Java method level
	Understanding the Spring Security filter chain
	Spring security testing
	Actuators, Metrics, and Health Indicators
	Exposing Spring Boot Actuator endpoints
Module 17	Custom Metrics
	Health Indicators
	Creating custom Health Indicators
	External monitoring systems
Module 18	Project work and documentation

# ADVANCED AUTOMOBILE APPLICATION IN COLLABORATION WITH AUTHORIZED TATA MOTORS WORKSHOP (PROJECT-BASED)

No		Topics
1	•	Workshop technology and soft skill
2	•	Basic Course on industry safety
3	•	Automobile aggregates & pre-delivery inspection(PDI)
4	•	Basic in IC engine & hands-on job on various heavy and small CL engines
5	•	Advanced course on EDC electronic diesel control system & onboard diagnostic system
6	•	Advanced course on CRDI system
7	•	Tipping system
8	•	Ac system
9	•	Advanced course on various clutch system-hydraulic clutch, Mechanical clutch
10	•	Advanced course on various transmission systems and hands-on job on heavy and medium transmission
		systems
11	•	Advanced course on fully floating and semi-floating axles
12	•	Hands-on job on different systems (Banjo and Salisbury)type inter-axle and wheel lock system
13	•	Advanced course on air and vacuum-assisted hydraulic brake systems with ABS
14	•	Hands-on job on mechanical and power steering system
15	•	Advanced course on auto electrical, Body Electrical system, Starting system charming system
16	Pro	eject work and documentation

#### REVIT (PROJECT-BASED)

#### Description

The course 'Autodesk Revit Bim training' is based on my personal experience as an Autodesk Authorized Instructor, it starts with a preliminary tutorial so that you can become familiar with the graphic interface of the program Autodesk Revit Architecture, and then we will learn how to set up a project from scratch, establish structural grid lines and reference lines and start setting up structural columns.

The next step will be installing walls, controlling their wall assembly, and learning how to customize elements, you will learn how to use the curtain wall tool and create slabs and stairs.

A tutorial focuses on roofs, building them, and giving the proper slope. Later you will learn how to use the area command, which will allow you to quickly and effectively calculate the area for your project and how to generate schedules and area takeoffs.

#### **Expectations and Goals**

If you are interested in automated drawing, design, or architecture, this is the right course for you! Drawing time will be radically reduced and more realistic.

Module	Торіс
	Introduction
	Introduction to Autodesk Revit Architecture, user Interface.
Module 1	BIM and Autodesk Revit
iviodule 1	Overview of the Interface
	Starting Projects
	Viewing Commands
	Uses Of Basic Sketching and Modify Tools
	Using General Sketching Tools
	Editing Elements
Module 2	Working with Basic Modify Tools
	Working with Additional Modify Tools
	Modifying Walls
	Adding Room Elements
	Techniques for Working with Door and Windows
	Inserting Doors and Windows
	Loading Door and Window Types from the Library
Madula 2	Creating Additional Door and Window Sizes
Module 3	Creating Curtain Walls
	Adding Curtain Grids
	Working with Curtain Wall Panels
	Attaching Mullions to Curtain Grids
	Extended Features about Working with Views
	Setting the View Display
	Duplicating
	Adding Callout
	Creating Elevations and Sections
NA a ded a A	Concepts about Adding Components:
Module 4	Adding Components
	Modifying Components
	Extended Facts about Modeling Floors:
	Modelling Floors
	Creating Shaft Openings
	Creating Sloped Floors

	Modeling Ceilings into Building Project:
	Modelling Ceilings
	Adding Ceiling Fixtures
	Creating Ceiling Soffits
	Application of Modeling Roofs:
	Modelling Roofs
	Creating Roofs by Footprint
Module 5	Establishing Work Planes
	Building Roofs by Extrusi <b>on</b>
	Modeling Stairs, Railing, and Ramps:
	Creating Component Stairs
	Modifying Component Stairs
	Working with Railings
	Building Ramps
	Techniques for Creating Construction Documents:
	Setting Up Sheets
	Placing and Modifying Views on Sheets
	Printing Sheets
	Annotating Construction Documents:

#### CYBER SECURITY AND ETHICAL HACKING

#### Description

A Certified Ethical Hacker is a skilled professional who understands and knows how to look for weaknesses and vulnerabilities in target systems and uses the same knowledge and tools as a malicious hacker, but lawfully and legitimately the security posture of a target system(s). The CEH credential certifies individuals in the specific network security discipline of Ethical Hacking from a vendor-neutral perspective.

#### **Expectations and Goals**

The Purpose of the CEH credential is to:

- Establish and govern minimum standards for credentialing professional information security specialists in ethical hacking measures.
- Inform the public that credentialed individuals meet or exceed the minimum standards.
- Reinforce ethical hacking as a unique and self-regulating profession.

#### **Prerequisites**

None

Sl. No.	TOPIC
Module 1	Introduction to Ethical Hacking
	What is Cyber Security?
	What is Hacking?
	What is Ethical Hacking?
Wiodule 1	Types of Hackers
	Hacking Concepts
	Ethical Hacking Concepts
	Penetration Testing Concepts
	Lab Setup
	Concept of Virtualization Virtualbox Installation Kali Linux
Module 2	.iso Installation
	Introduction to Kali Linux Linux File Structure
	Linux Environment Basic Linux Commands
	Networking Basics
	IP Address & Classes
	MAC Address
Module 3	Type of MAC Address

#### MOBILE APPLICATION DEVELOPMENT USING FLUTTER

#### Description

App Development using Flutter is designed in a way that on learning one can gain the experience of developing an app serving different domains. Flutter helps to develop cross-platform applications for Android, iOS, Linux, Mac, Windows, Google Fuchsia, and the web from a single codebase.

#### **Expectations and Goals**

The course is designed for participants who are interested in developing hybrid apps but don't have any prior knowledge of technology(s). On learning this framework, one will be able to build a hybrid app and deploy it on a targeted device.

#### **Prerequisites**

Trainee(s) with no prior knowledge of any technology can easily enroll themselves for the course. Basic knowledge of programming language will be sufficient.

Module No	Торіс
Module 1	Introduction of Mobile Apps
	Discussion on different technologies and framework
	Introduction to Flutter
	Flutter Definition
	Flutter Architecture
	Introduction to Dart
	Installation of IDE(s), tools, packages
Module 2	Flutter SDK
Module 2	Setting up of a device
	Enabling web support
	What is Dart
Module 3	How to write code in Dart?
Wiodule 3	Oops concept in details
	Implementation using an online editor
	Different ways of creating of Flutter project
Module 4	Understanding the file structure of a project
Wioduic 4	Writing of Flutter code using Dart
	Running into targeted device
	Introduction to widgets
Module 5	Use of different widgets and their implementation
	Explanation of Widget Tree
	Types of Widgets
Module 6	Use of stateful widgets and lifecycle
Wioduic 0	Use of stateless widgets
	Implementation
	Different layouts and their use
Module 7	Designing the screen with a different layout
	Use of different designing tools/libraries
	Handling events and functions
	Creation of customized widgets
	Different states and widgets connection
Module 8	Styling and theming
	Use of external package and upgrading the project
	Implementation
_	Screens and routing
Module 9	Different routing techniques
	Different navigation widgets

	Linking with the tabs, menus, and options
	Data Listing
	Multiline text/input in the view and its management
	Understanding List, Grid, Stack and implementation
	Data and Backend
Module 11	Different Storage forms and usage
Wiodule 11	Adding external dependency for suitable storage
	Relevant Coding
	Images and media
Module 12	Camera and Gallery usage
Wiodule 12	Handling multimedia support
	Creation of supported Apps
	Packages and Plugins
Module 13	Discussion on essential packages and plugins
	Implementing platform-specific changes
Module 14	Project Development and Documentation Report preparation

Module 10	Adding static files
	Models and Databases
	Admin Interface
	MVT –In details
	Forms and Validations
	• Forms
Module 11	<ul> <li>Validation</li> </ul>
	Relative URL
	Template Inheritance
	Advanced Django
	Django's in-built User
Module 12	Registration
	• Login
	• Logout
	Generic Views
	CRUD Implementation
Module 13	Project Work and Documentation

#### FULL STACK WEB DEVELOPMENT USING PHP AND MYSQL

#### Description

The PHP Training course is designed to train the students on Core and Advanced topics of PHP with other tools like HTML5, JavaScript, and CSS, using Live Projects. Ardent has years of experience in developing and deploying hundreds of projects using PHP 8. This software development experience is very valuable in teaching the students everything they require to learn in a true development environment. With the best industry-experienced developers as trainers, Ardent delivers the best PHP Training with Live Projects to make students learn PHP and get placement immediately after finishing their course. Contact us to get more information about PHP Training Course details and fee structures.

#### **Expectations and Goals**

100% Practical, Personalized, Classroom Training, Learn from industry Experts (8+ years' experience) No hired faculty, Assignment: Entire training is based on daily assignments, 100% Practical Training: Students can carry their own laptop, Live projects: All training on live projects through Certified Trainer, 100% Job assistance for qualified students, Weekend Batches, Convenient Timings for Professionals.

#### **Prerequisites**

Anybody interested in PHP can take this training.

Module	Торіс
Module 1	Introduction to HTML 5 & CSS 3 HTML Tags Basic understanding of CSS Lab Session
Module 2	Introduction to PHP 8 Learn the new features of PHP 8 Configure PHP 8 (XAMPP/WAMP) Use Form Handling Use Variables and Expressions Use various types of operators Explain the usage of scalar-type declarations in programs Use conditional and flow control statements Use functions Create and use arrays Lab Session
Module 3	Form Handling Understanding GET, POST & REQUEST methods Handling Form events Sanitize and validate form data. Encryption techniques Protecting from data from SQL / URL injections Lab Session
Module 4	MySQL Database Introduction to database management (RDBMS) Preparing SQL Query statements Database connectivity DML Operations using MySQLi MySQL Joins, Between, IN, LIMIT operators Lab Session
Module 5	State Management Use cookies & Perform session management

	Lab Session
Module 6	File Uploading File upload & download in server View and delete the uploaded file Lab Session
Module 7	JavaScript, jQuery, and Ajax Basic understanding of JavaScript Understanding of DOM Variable declarations Use conditional and flow control statements Use functions Event Handling Data Validation Introduction to jQuery Implement Ajax using PHP Lab Session
Module 8	Introduction to PHP Framework What is MVC Introduction to Laravel Laravel Installation in Windows / Linux
Module 9	Project Work and Documentation

#### GENERATIVE AI AND PROMPT ENGINEERING

#### Description

This course provides an in-depth exploration of generative artificial intelligence (AI) techniques, with a focus on prompt engineering methodologies. Students will learn the fundamentals of generative AI models, including language models such as GPT (Generative Pre-trained Transformer), and gain practical experience in prompt design and fine-tuning for various applications. This curriculum covers theoretical foundations, practical techniques, ethical considerations, and real-world applications of generative AI and prompt engineering. Through lectures, discussions, hands-on projects, and presentations, students will gain a comprehensive understanding of how to effectively utilize and deploy generative models while responsibly addressing ethical concerns.

#### **Expectations and Goals**

- Understand the principles and architecture of generative AI models
- Gain proficiency in prompt engineering techniques
- Apply generative AI models to real-world problems
- Analyze ethical implications and biases in generative AI applications

#### **Prerequisites**

- Basic understanding of machine learning concepts
- Familiarity with Python programming language
- Knowledge of neural networks and deep learning concepts

Module	Торіс
Module 1	Introduction to Generative AI
	Understanding generative artificial intelligence
	<ul> <li>Applications of generative models in various domains</li> </ul>
	<ul> <li>Types of generative models: autoregressive models, VAEs, GANs, etc.</li> </ul>
	Foundations of Prompt Engineering
Module 2	The role of prompts in guiding generative models
iviouule 2	<ul> <li>Introduction to prompt engineering and its significance</li> </ul>
	Basic principles of prompt formulation and design
	Language Models and Prompt-based Generation
Module 3	Overview of language models for text generation
iviodule 5	Introduction to OpenAI's GPT series
	<ul> <li>Understanding prompt-based generation with GPT models</li> </ul>
	Advanced Prompt Engineering Techniques
Module 4	Advanced prompt design strategies
Wiodule 4	<ul> <li>Handling biases and improving fairness in prompt engineering</li> </ul>
	<ul> <li>Fine-tuning strategies for specific tasks and domains</li> </ul>
	Evaluation Metrics and Performance Analysis
Module 5	Metrics for evaluating generative AI models
Widule 5	Benchmark datasets and evaluation techniques
	Analyzing model performance and identifying areas for improvement
	Deploying Generative AI Models
Module 6	Deployment considerations for generative AI models
	<ul> <li>Infrastructure requirements and model serving</li> </ul>
	Scalability and performance optimization
Module 7	Project work and documentation

#### VLSI AND FPGA DESIGN COURSE USING VHDL / VERILOG

The objective of the VLSI and FPGA design course using VHDL / Verilog is to equip students and professionals with the theoretical knowledge and practical skills required to design, simulate, synthesize, and implement digital systems on both ASIC (Application-Specific Integrated Circuits) and FPGA (Field-Programmable Gate Arrays) platforms. By using both VHDL and Verilog, the course aims to provide proficiency in two of the most widely used hardware description languages (HDLs) in the industry.

#### **Key Objectives:**

#### 1. Fundamentals of VLSI Design:

- To understand the concepts of VLSI technology, including the design flow, fabrication processes, and design methodologies.
- To learn the architectural and circuit-level techniques required for designing efficient integrated circuits (ICs).

#### 2. Introduction to FPGA Design:

- To gain knowledge of FPGA architecture, design flow, and applications.
- To understand the FPGA implementation process, including logic synthesis, place-and-route, and timing optimization.

#### 3. Mastery of HDLs (VHDL and Verilog):

- To develop the ability to write digital designs using VHDL and Verilog.
- To become proficient in writing and simulating both combinational and sequential logic designs using both HDLs.
- To understand the differences between VHDL and Verilog, enabling the selection of the appropriate language for various digital design projects.

#### 4. Digital System Design:

- To design and simulate combinational and sequential circuits, such as adders, multiplexers, counters, and finite state machines (FSM).
- To implement complex digital designs such as arithmetic logic units (ALUs), memory systems, and controllers.

#### 5. RTL Design, Synthesis, and Simulation:

- To learn Register Transfer Level (RTL) design principles and write RTL code for digital circuits.
- To perform synthesis, functional verification, and timing analysis using industry-standard tools like Xilinx Vivado, Modelsim, and Intel Quartus.

#### 6. Timing Analysis and Optimization:

- To understand and perform static timing analysis (STA) to ensure correct circuit operation under timing constraints.
- To explore power optimization techniques for low-power VLSI and FPGA designs.

#### 7. Project-Based Learning:

• To apply the theoretical knowledge gained to practical projects, such as designing a digital system on FPGA, implementing FSM-based control systems, or developing custom IP blocks.

By the end of this course, learners will be able to design, verify, and implement digital circuits for both VLSI and FPGA platforms, using both VHDL and Verilog, thereby preparing them for roles in digital system design, hardware verification, and FPGA/VLSI development in the semiconductor industry.

Module	Topics
Module 1	Introduction to SoC Design
	Application, Scope
	Different chip design approaches
Module 2	VHDL
	Verilog
Module 3	Basic level Gate design concepts
iviouule 3	Full Adder, MuX, 7 Segment, Comparator
Module 4	Gate level Latch, Flip Flop, Register, and Counter design
Module 5	CMOS-based design concept
Wiodule 3	CMOS-based NAND, NOR, XOR, XNOR Universal Gate design
Module 6	CMOS-based Latch, Flip flop, Register design
Module 7	CMOS based Register and counter design
Module 8	CMOS Layout fabrication process
IVIUUUIE O	Different Gate Layout Design
Module 9	Layout-based IC Design
	VHDL and Verilog coding
Module 10	Behavioral, data flow, and structural coding
	Different control statement when, process, wait statement
Module 11	Analog VLSI
oddic 11	Analog CMOS Design
Module 12	Project work and report preparation

WEB DESIGNING USING HTML 5, CSS3, JAVASCRIPT, BOOTSTRAP (PROJECT BASED)

#### Description

Web Design course is a project-based course that teaches students how to build their own web pages. Students will learn the languages HTML and CSS, and will create their own live homepages to serve as portfolios of their creations. By the end of this course, students will be able to explain how web pages are developed and viewed on the Internet, analyze and fix errors in existing websites, and create their very own multipage websites.

#### **Expectations and Goals**

Students will learn and explore concepts around designing, creating, and viewing web pages on the Internet. Students will understand the knowhow and can function either as an entrepreneur or can take up jobs in the multimedia and Web site development studio and other information technology sectors. The student will be able to

- Define the principle of Web page design.
- Define the basics in web design.
- Visualize the basic concept of HTML.
- Recognize the elements of HTML.
- Introduce basics concept of CSS.
- Develop the concept of web publishing.

#### **Prerequisites**

The Web Design course is designed for complete beginners with no previous background in computer science. The course is highly visual, dynamic, and interactive making it engaging for students new to computer science. The course has a strong focus on creation. Students will be able to use their own personal interests and creativity to drive their development process.

Module	Topic
Week 1	Getting Started - What is The Web
	Brief History of Internet What is World Wide Web Why create a web site
	Web Standards
	HTML - Structuring Websites
	Introduction to HTML What is HTML
	HTML Documents
Week 2	Basic structure of an HTML document Creating an HTML document
	Mark up Tags Heading-Paragraphs Line Breaks
	HTML Tags
	Elements of HTML
Week 3	Introduction to elements of HTML Working with Text
	Working with Lists, Tables and Frames
	Working with Hyperlinks, Images and Multimedia
	Working with Forms and controls.
	CSS - Styling Websites
Week 4	Concept of CSS Creating Style Sheet CSS Properties
	CSS Styling(Background, Text Format, Controlling Fonts) Working with block elements and objects
	Working with Lists and Tables CSS Id and Class
	Box Model(Introduction, Border properties, Padding Properties, Margin properties)
	CSS Advanced(Grouping, Dimension, Display, Positioning, Floating, Align, Pseudo class,
	Navigation Bar, Image Sprites, Attribute sector)
	CSS Color
	Creating page Layout and Site Designs.

	Working with the polinka larges and Multimedia
	Working with Hyperlinks, Images and Multimedia
	Working with Forms and controls.
	Introduction to JavaScript Java Script Language Basics
	JavaScript Objects JavaScript Scope JavaScript Events JavaScript Strings JavaScript Numbers
	JavaScript Math JavaScript Arrays JavaScript Boolean
	JavaScript Comparisons JavaScript Conditions JavaScript
Week 5	Switch JavaScript Loops
	JavaScript Type Conversion JavaScript RegExp JavaScript Errors
	JavaScript Debugging JavaScript Functions JavaScript
	Forms
	JavaScript HTML DOM
	Introduction to jQuery
Week 6	jQuery Syntax jQuery Selectors jQuery Events jQuery
VVCCKO	Effects jQuery HTML jQuery Traversing jQuery AJAX
	jQuery Misc.
	Bootstrap introduction
	Bootstrap Basics
Week 7	Bootstrap Grids
	Bootstrap Themes Bootstrap CSS
	Bootstrap JS
	Bootstrap in depth
	Bootstrap Grid System:
	Basics of the grid system
	Creating responsive layouts
	Using grid classes for different screen sizes
	Bootstrap Components:
	Navigation bars
	Buttons
	• Forms
	Modals
Week 8	Alerts
	Cards
	Bootstrap Utilities:
	Spacing
	• Colors
	Typography
	Flexbox utilities
	Advanced Bootstrap:
	Customizing Bootstrap with Sass
	Bootstrap themes
	Integrating Bootstrap with JavaScript plugins

October 03, 2020

Ref: ASD/DAT/SBM/51093

Subject: INTERNSHIP CONFIRMATION LETTER

Dear SUMIT SARKAR

Your application for the Industrial Training and Internship is accepted. The details are below:

College/University: SBMS INSTITUTE OF TECHNOLOGY

Technology Domain: DATA SCIENCE, AI, MACHINE LEARNING USING PYTHON (PROJECT BASED)

Internship Start Month: OCTOBER 2020

Duration: 6 Weeks

This is a project based program. You will have to develop a project, prepare project report and project presentation.

**★ INTERNSHIP MILESTONES**: TRAINING ON THE TOPIC/TECHNOLOGY → PROJECT ALLOCATION → PROJECT IMPLEMENTATION → PROJECT REPORT PREPARATION /PPT PREPARATION → ASSESSMENT → CERTIFICATE DISBURSAL.

Wish you a progressive learning journey with us.

Thanking you,

Best Wishes,

Mahendra Datta

Head – Learning and Development Academy of Skill Development

# **Academy of Skill Development**

A non-profit trust registered with Govt. of West Bengal U/S 60 and Rule 69 with registration number -190307248

We dream of self-sufficient India

# **Industrial Internship Certificate**

This certificate is awarded to

#### SUMIT SARKAR

of SBMS INSTITUTE OF TECHNOLOGY

for successfully completing the Industrial Internship on

DATA SCIENCE, AI, MACHINE LEARNING USING PYTHON (PROJECT BASED)

from

October 3, 2020 to December 19, 2020 (6 Weeks)

and implementing the project titled

Certificate ID: ASD/DAT/SBM/PAY/51094 Issue Date: December 19, 2020

**INDUSTRIAL INTERNSHIP CERTIFICATE** 

A non-profit trust registered with Govt of West Bengal U/S 60 and Rule 69 registration. no -190307248

# **Industrial Training Certificate**

This certificate is awarded to

We dream of self-sufficient I हम आत्मनिर्भर भारत का सपना देखते हैं

**SUMIT SARKAR** 

of

SBMS INSTITUTE OF TECHNOLOGY

# for successfully completing the Industrial Training on

DATA SCIENCE, AI, MACHINE LEARNING USING PYTHON (PROJECT BASED)

from

October 3, 2020 to December 19, 2020 (6 Weeks)

and implementing the project titled

PAYMENT GATEWAY

Issue Date:

Certificate ID: ASD/DAT/SBM/PAY/51095 December 19, 2020

**INDUSTRIAL TRAINING CERTIFICATE** 

**COMPLETION CERTIFICATE** 

# This is to certify that SUMIT SARKAR

# has completed the project titled

**PAYMENT GATEWAY** 

# using

DATA SCIENCE, AI, MACHINE LEARNING USING PYTHON (PROJECT BASED)

to fulfill the requirement of

### INDUSTRIAL TRAINING AND INTERNSHIP

under the guidance of the technical team of

**ACADEMY OF SKILL DEVELOPMENT** 

We observed that the work carried out is satisfactory and deserves appreciation.

Head Technology Services
